TAMPINES - 1 Tampines Central 5, #07-04/05, CPF Tampines Building, Singapore 529508

ULTRASOUNDS

PELVIS (TRANSABDOMINAL) (F) 骨盆 (经腹) (女)

Uterus, ovaries, cervix, fallopian tube, bilateral adnexa, pouch of douglas

It is commonly used to identify abnormalities in the female reproductive system particularly for the ovaries and uterus such as ovarian cysts or cancer, uterine fibroids or endometrial thickening (which can be a sign of uterine cancer). It is also helpful in the investigation of heavy or painful menstrual bleeding, irregular menses, and infertility.

\$141.70*

BREAST (F) 乳房 (女)

Breasts

An internal scan of the structures of the Breast to diagnose breast lumps or any abnormalities found. This is particularly helpful in younger ladies (< 40 years old) with denser breasts which may not be suitable for mammogram yet, or those who already have a known breast lump for investigation or follow-up.

\$141.70*

MAMMOGRAM 乳房X光检查

Breasts

A specialised X-ray of the Breast that aids in early detection of breast cancer. It is usually recommended for women above 50 years of age. For younger women, or those who have known breast diseases, you are recommended to check with your doctor regarding the recommended Breast Screening modality (i.e, an ultrasound or MRI of the Breast may be more suitable)

\$141.70*

PROSTATE (M) 前列腺 (男)

Prostate, seminal vesicles

Examines risk of Prostate cancer, benign prostatic hyperplasia (enlargement of the prostate) or any other prostate-related conditions. If you have a known elevated PSA level, this is also a recommended next step in investigation or monitoring of the prostate.

\$141.70*

THYROID 甲状腺

Thyroid

Monitors and characterizes the swellings found in the Thyroid gland, particularly whether there are any nodules suspicious for cancer, which may need a referral for biopsy.

\$141.70*

CAROTID (INTIMA-MEDIA THICKNESS) 内膜内侧厚度

Carotid artery, Cardiovascular risk

Ultrasound Carotid (Intima-Media Thickness) Test (CIMT) is a non-invasive ultrasound imaging technique used to measure the thickness of the carotid artery wall. It helps assess the risk of cardiovascular disease by detecting the presence of atherosclerosis or plaque build-up in the neck arteries.

\$141.70*

KIDNEYS 肾脏

Kidneys, upper urinary tract

A scan that assesses the physical appearance of the Kidneys. An Ultrasound can detect cysts, tumours, and kidney stone disease. It is also useful if you have a history of hematuria (blood in the urine), recurrent UTI (urinary tract infection), or any sudden changes in your renal function in your laboratory results.

\$141.70*

LIVER (HEPATOBILIARY SYSTEM) 肝脏

Liver, gallbladder, pancreas, spleen

A scan with focus on the Liver, gall bladder and pancreas. Useful for individuals with an abnormal cholesterol or liver function test, this test most commonly detects fatty liver, liver cysts and tumours which may prompt the need for more urgent management.

\$163.50*

FULL ABDOMEN 腹部 (Kidneys + Liver)

Liver, gallbladder, pancreas, spleen, kidneys

Includes the analysis of the main organs in the abdomen (liver, gall bladder, pancreas, kidneys, and spleen). Useful to complete a more detailed health screening for asymptomatic patients, or those with known blood test abnormalities in the above organ systems (e.g liver function and urine analysis). Detailed evaluation of the stomach and intestines might still require other modes such as CT scan / endoscopy.

\$196.20****Price include 9 %GST(包含 9% GST)**

TREADMILL STRESS ECG 心脏压力测试

Electrocardiogram, heart arrhythmia

A form of cardiovascular stress testing that monitors your electrocardiogram (ECG) and blood pressure (BP) levels during increasing difficulties of exercise. This can be useful for select group of patients who may have intermediate risk of coronary artery disease. (Pre-test consent is required, please approach our staff for more information)

\$ 218 *

CLINICAL TESTS

CHEST X-RAY 胸部X光

Lungs, heart, airways, bones

A basic imaging test that helps detect some abnormalities found in the heart, lungs, blood vessels, airways, the bones of your chest and spine. It can also be helpful as an initial investigation for those with lung related symptoms such as those with chronic cough, fatigue.

\$ 32.70 *

ECG 心电图

Electrocardiogram, heart arrhythmia

Also known as Electrocardiogram, this test checks the rhythm of your heart and its electrical activity. A resting ECG is a helpful initial test if you have a history of cardiac risk factors (e.g hypertension, high cholesterol / diabetes) or factors predisposing to irregular heart rhythm (eg thyroid, electrolyte / kidney disorder based on your previous blood tests).

\$ 32.70 *

BONE MINERAL DENSITY 超声骨密度

Heel ultrasound, bone health

A heel ultrasound (non-radiation) screening test will be conducted to measure the calcium density in your bones. It is helpful together with Vit D tests to advise on the need for supplementation to prevent onset of osteoporosis - which is irreversible bone calcium loss. A BMD is also highly recommended for ladies as they prepare to head into menopause.

\$ 32.70 *

SPIROMETRY 肺活量测试

Lungs, airways

A non-invasive test that is a part of lung function testing by measuring how much air you can breathe out in one forced breath. This is particularly useful for screening for chronic lung disease such as COPD (Chronic Obstructive Pulmonary Disease). If you have not seen a Respiratory Physician recently and have symptoms and risk factors such as a history of smoking, asthma, persistent cough or recurrent unexplained breathlessness, you may benefit from a spirometry.

\$ 32.70 *

(N.B. Please refer to our Spirometry Patient Information Sheet for more details and when you should NOT do a spirometry)

AUDIOMETRY 听力测试

Ears, hearing

Tests your ability to hear varying types of sound, based on their loudness (intensity) and the speed of sound wave vibrations (tone). This test is useful for adults of any age as it can detect hearing loss at an early stage (before noticeable symptoms) or as part of initial work-up when you are having hearing problems from any cause.

\$ 32.70 *

TONOMETRY 眼压

Eyes, intra-ocular pressure

A quick scan that checks the intra-ocular pressure of your eyes to see if you're at a risk of glaucoma, the number one leading cause of blindness. Glaucoma is a disease that damages your eye nerves overtime resulting in a loss of vision. Early screening would help to protect your eyesight and slow down the process of vision loss.

\$ 32.70 *

DIGITAL RETINAL IMAGING (DRI) 视网膜照相

Eye, retina, optic nerves

Also known as a fundus photo, it is a non-invasive, diagnostic tool that produces digital high resolution, colored images of your retina, optic nerve, and blood vessels in the back of your eye. It is able to screen for 3 main eye conditions which are the top causes for vision loss: Glaucoma, Diabetic Retinopathy and Age-related Macular Degeneration (AMD). This is helpful even before you have visual symptoms as these conditions may benefit from early intervention before further irreversible eye damage.
